## Interactive Class systems in UNINETTUNO course delivery model

12 September 2017: 11.00 – 12.00 (CEST)

By: Alessandro Caforio (International Telematic University UNINETTUNO)

### **Abstract**

Uninettuno developed and evolves its own organizational and didactic models for course design and delivery through a research-driven approach: experimentation/prototyping - piloting - large scale roll out. One of the main components of Uninettuno delivery model is the provision of environments and activities for interactive and collaborative learning. The webinar will briefly introduce Uninettuno models, focusing then on the process that led to evolve the "Virtual Classroom" system in an "Interactive Class" system (experimentation - piloting - large scale roll out), and on the psycho-pedagogy-centered approach adopted for the definition of teaching/learning model framework for all the actors of the teaching/learning process.
